

ALPINE CONTEMPORARY 8x12

Westchester Blend

Chesapeake Blend

The 8x12 paver offers versatility and durability with a sleek, smooth surface, making it an excellent choice for both primary paving and complementary borders. Its balanced proportions allow for creative design options, whether used alone for walkways and patios or as a stylish frame for larger pavers.

INSTALLATION GUIDELINES: SAND

After excavation, compact the sub grade and install a woven separation fabric if needed. Spread and compact a base of clean, dense graded aggregate (road base). Typical compacted base thickness is 4-6" for pedestrian applications. Pavers are set on a loosely screened 1" bed of graded, clean concrete sand. Maintain a joint size of 1/16" - 3/16". When pavers are set, compact paving stones into sand with mechanical plate vibrator. Joint sand may be spread over paving stones during compaction. Installed pavers should be set 1/8" to 1/4" above final elevations to compensate for any potential settlement. Spread clean dry sand over surface and broom sweep to fill joints. Run vibrator one final time after filling joints.

NICOLOCK PAVING STONE 1" - 3 1/8" THICK

CROSS-SECTION OF TYPICAL INSTALLATION

NOTE: All measurements are nominal. Variance in square footage or linear footage coverage can be up to 5% depending on joint width. The possible occurrence of efflorescence does not affect the structural integrity of the product. Efflorescence is a normal occurrence in concrete products and will dissipate with normal weathering. The use of concrete as a base or setting bed may increase the possibility of efflorescence.

CAUTION: Always use a plate compactor with a pad when installing any textured paving stone.
